Material Safety Data Sheet

SECTION 1: PRODUCT AND COMPANY INFORMATION

MANUFACTURER/SELLER: LEBLANC FRAGRANCE S.L. S.C. INC.
 MANUFACTURER/SELLER'S ADDRESS: 1400 N. CENTRAL EXPRESSWAY, DUNWOODY, GA 30328
 PRODUCT NAME: HEMBA - ONE
 PRODUCT USE: LIGHT DUTY CLEANER & DEODORIZER
 EMERGENCY PHONE NUMBER: (800) 744-8888

SECTION 2: HAZARD IDENTIFICATION

HAZARD STATEMENT: CAUSES SKIN IRRITATION
 HAZARD PICTURE:

HAZARD CLASSIFICATION: **2**
 Signal Word: **Warning**
 Precautionary Statement: P201+202, P273
 Hazardous Ingredients: None

MATERIAL SAFETY DATA SHEET

SECTION 3: COMPOSITION INFORMATION

HAZARDOUS INGREDIENTS	C.A.S. #	%	TLV	LOEL	LC50
ISOPROPYL ALCOHOL	67-63-0	0-18	SEE PREVIOUS SECTION	12000 PPMSD (PA, RAT)	
ALCOHOL OR (1), ETHANOL	64739-88-3	0-18	N.A.C.	1000 MG/SD (RAT, MTD)	
ALUMINUM CHLORIDE	13811-35-1	1-1	N.A.C.	SEE SECTION 11	SEE SECTION 11

SECTION 4: FIRST AID MEASURES

SKIN CONTACT: IF SKIN CONTACT WITH SKIN, WASH IMMEDIATELY WITH PLenty OF SOAP AND WATER. CALL A PHYSICIAN IMMEDIATELY IF SKIN IS CONTAMINATED (CUTTING, ABRASION, ETC.). IF SKIN IS IRRITATED, CALL A PHYSICIAN IMMEDIATELY.
EYE CONTACT: IMMEDIATELY FLUSH EYES WITH PLenty OF WATER. CALL A PHYSICIAN IMMEDIATELY.
INHALATION: REMOVE FROM AREA TO FRESH AIR. IF NOT AFFECTIONED BY VAPOR, REMAIN OUTDOORS UNTIL BREATHING GIVE SUFFICIENTLY CLEAR. IF AVAILABLE, GET IMMEDIATE MEDICAL ATTENTION.
INGESTION: CALL A PHYSICIAN IMMEDIATELY. GIVE MILK OR WATER TO DRINK. DO NOT INDUCE VOMITING. IF VOMITING OCCURS, DO NOT INDUCE VOMITING. IF VOMITING OCCURS, DO NOT INDUCE VOMITING. IF VOMITING OCCURS, DO NOT INDUCE VOMITING.
NOTES TO PHYSICIAN: IDENTIFY PRODUCT BY NAME AND CHEMICAL NAME. IDENTIFY PRODUCT BY NAME AND CHEMICAL NAME. IDENTIFY PRODUCT BY NAME AND CHEMICAL NAME.

MATERIAL SAFETY DATA SHEET

FRAGRANCE OIL - Palma Violet

1. Identification of Substance, Preparation and Packaging

Product Name: Fragrance Oil - Palma Violet
 Product Code: 708
 Company Name: Bathbomb.biz limited
 Company Address: Unit 4 Bessmer Park, Bessmer Road, Basingsale, Hampshire, RG21 3NB
 Emergency Phone Number: 01256 474889

2. Composition Information on Ingredients

Definition / Botanical Origin	multicomponent mixture of natural and synthetic aromatic materials
CAS Number	Not applicable, product is a mixture
EINECS Number	Not applicable, product is a mixture

Contains:

CAS / EINECS	Hazard Symbols	Conc %
alpha iso methyl ionone	R 20/21, R 22	25-50
Anisyl Salicylate	N, R 51/53	1-5
(L) citronellal	Xn, R 36	1-5
GALAXOLIDE 50 DEP	N, R 50/53	0.1-1
Ionone	Xn, R 36	0.1-1
(L) p-tert-butyl-alpha-methylcyclohexanecarboxaldehyde	Xn, R 22	1-5
PARA TERTIARY BUTYL CYCLO HEXYL ACETATE	N, R 51/53	25-50
Phenyl Ethyl Alcohol	Xi, R 36	5-25
TERPINEOL	Xi, R 36	1-5
Tonalid	Xn, N, R	1-5

Version 1.0

Material Safety Data Sheet

Benzyl Benzoate

Section 1: Chemical Product and Company Identification

Product Name: BENZYL BENZOATE
 CAS #: 100-81-5
 EINECS #: 200-811-5
 Molecular Weight: 212.24
 Formula: C14H12O2

Section 2: Composition Information on Ingredients

Product Name: BENZYL BENZOATE
 CAS #: 100-81-5
 EINECS #: 200-811-5
 Molecular Weight: 212.24
 Formula: C14H12O2

Section 3: Hazardous Ingredients

Hazardous Ingredients: None

P&G Baby Wipes MSDS 5

SECTION XV - REGULATORY INFORMATION

While this finished product is not considered hazardous as defined by OSHA in 29 CFR 1910.1200 (d), this MSDS contains valuable information critical to the safe handling and proper use of this product.

Federal:
 This product is not regulated by EPA TSCA.
 The product described in this Material Safety Data Sheet is regulated under the Federal Food Drug and Cosmetic Act and is safe as per directions on the label.

States:
 CA Prop 65 – This product is not subject to warning labeling under California Proposition 65.

SARA 313/302/304/311/312 chemicals: NONE
CERCLA Chemicals: NONE
State Right-to-Know:
 The following ingredients present in the finished product are listed on state right-to-know lists or state worker exposure lists:

Benzyl Alcohol (CAS# 100-51-6) MA, MN, PA
 Glycerin (CAS# 56-81-5) CA, IN, KY, MA, NJ, MN, OR, PA, TN
 Phenoxyethanol (CAS 122-99-6) NJ, PA, RI

Other:
 Perfumes contained within the product covered by this MSDS comply with the appropriate IFRA guidance.

Canada:
 All ingredients are CEPA approved for import to Canada by Procter & Gamble.
 This product has been classified in accordance with the hazard criteria of the Canadian *Controlled Product Regulations* and the MSDS contains all information required by the *Controlled Products Regulations*.

Is benzyl alcohol flammable. Benzyl alcohol storage conditions. Msds for benzyl alcohol.

Just like the smell of sunscreen or the sound of a rolling suitcase, a special occasion cocktail can be the key to a vacation mindset. During travel times complicated by the global pandemic, a fun cocktail has helped make evenings at home feel like virtual getaways. As a result, Americans have been turning to Google over the past year for at-home cocktail inspiration — both for brand new recipes to try and for recipes to concoct their tried and true favorites at home. In fact, search interest for “cocktail warmer” in March of 2020 was nearly double what it was in March of 2019. While it’s no surprise that Americans have been making cocktails to spice up monotonous quarantine days, we did wonder: which cocktails have been most popular for Americans looking for flavorful escapes? Did Northerners sip on beachy piña colodas to transport them to warmer weather? Or did Kentuckians muddle mint juleps even when Churchill Downs was closed? To determine Americans’ favorite quarantine-era cocktails, we first compiled a list of the most common and most popular cocktails around the U.S. Next, we pored over Google Trends data from the past 12 months for each cocktail to see which one Americans searched for the most. We analyzed the results on both a state-by-state basis and a national level. Additionally, we looked at seasonal trends by determining the most searched cocktails in both the warm weather months of spring and summer (3/19/20 through 9/22/20) and the cold weather months of fall and winter (9/23/20 – 12/31/20). It has to be five o’clock somewhere, so take a seat and see what we uncovered! The Most Popular Cocktails Around the U.S. First up, we looked at the most popular cocktails in every state. The mimosa was the top-searched cocktail in 6 states from Colorado to Maryland. The classic brunch blend of orange juice and Champagne is the perfect drink for switching up boring breakfasts with at-home brunches. It’s hard not to feel a little brighter when sipping on the fizzy, citrusy drink during a Zoom brunch with friends or while recreating your favorite diner’s pancakes at home. Still, it is interesting to see so many searches for a libation that’s quite simple to concoct. The next most popular cocktails were the Pina Colada, the Wine Cooler, the White Russian, the Margarita, and the Mojito (all in three states each). All of these drinks aren’t exactly casual, everyday drinks, making it especially interesting that they would find popularity in such geographic ranges. For instance, the piña colada was the top-searched cocktail in both New Jersey and New Mexico; the White Russian was the top-searched drink in Alaska and West Virginia; the mojito was the top-searched drink in Washington and Virginia. All of this goes to say that no matter where you live, a fun cocktail is a plane ticket to flavor! Some standout popular cocktails included Mississippi’s favorite, the old-fashioned, which Mississippians hopefully mix up using some local, Southern whiskey. The cosmopolitan earned unexpected popularity in Vermont. The Most Popular Warm and Cold Weather Cocktails in the U.S. Next, we took a deep dive into the most popular warm-weather cocktails in the U.S. After all, we know that Americans love to use their credit card points to explore warm locales like the Caribbean and even South America. People likely turned to refreshing, cool cocktails in their own homes to recreate the tropical vacation experience as they stayed home during the warmer months. During the spring and summer months, the top-searched cocktails included the Painkiller, the margarita, the piña colada, and the appletini. For those who aren’t familiar with a Painkiller, it is the ultimate beachy drink, complete with pineapple juice, rum, and orange juice. In states like Rhode Island and Massachusetts, people were making the most of their socially-distanced northern summers by making some of these cocktails. We only hope they had some lobster rolls to go with them. Indeed, during the summer months, we were glad to see that the top-searched drink in Kentucky was the mint julep. Maybe Kentuckians put on their hats and muddled some mint for at-home derby celebrations after all! There were some standout drinks over the warm weather months that we didn’t expect to see. For instance, in Arkansas, where you may expect humidity-burdened residents to prepare a refreshing drink, the top-searched cocktail was the dry martini, which may be better suited for a cozy, steakhouse dinner in the city. The popularity of the martini made us wonder about which drinks Americans were drinking during the winter months. We weren’t sure what we would see in terms of popular cold-weather drinks. After all, some Americans may have used summery cocktails to escape their cold confines during the pandemic. Still, others may have missed the liquid heat that they usually sip on at crowded bars during the cold months. We found that, generally, people chose to pour themselves some liquid sunshine. Nationally, the top 3 cold-weather cocktails were the mimosa, the margarita, and the Moscow mule. Interestingly, all 3 of these drinks call special occasions to mind, be it an endless mimosa brunch or a cheese board dinner with fizzy Moscow mules. Perhaps Americans were finding new ways to celebrate these nights as quarantine lasted through the winter months. On the other hand, some states got really into spiked warm drinks. For instance, in chilly Wyoming, residents were searching for hot buttered rum, a cold-weather drink filled with rum, butter, hot water or cider, and a sweet twist. We can only imagine how comforting a hot buttered rum would taste after a day spent safely exploring the wonders of Yellowstone. Final Thoughts Overall, we had fun exploring Americans’ favorite cocktails over the past year. Even imagining crisp appletinis and punchy margaritas had us remembering our silliest Zoom cocktail hours and at-home theme nights. In the end, the cocktails that Americans searched for showed that people were willing to treat themselves to some fun, delicious flavors even when they couldn’t head to local bars or travel to destination restaurants. With that being said, we are excited to travel safely again in the near future. So here’s to sipping our favorite drinks in our favorite places soon! MSDS Name: Benzyl alcohol, 99% Catalog Numbers: AC148390010, AC148390025, AC148390050, AC148395000, AC610241000, AC9713168, XXAC14839200 Synonyms: Phenylmethanol; Benzene carbinol; Benzenemethanol; Benzyl alcohol. Company Identification: Fisher Scientific 1 Reagent Lane Fair Lawn, NJ 07410 For information, call: 201-796-7100 Emergency Number: 201-796-7100 For CHEMTREC assistance, call: 800-424-9300 For International CHEMTREC assistance, call: 703-527-3887 A Material Safety Data Sheet (MSDS) is a written document that provides product users and emergency personnel with information and procedures needed for handling and working with chemicals. MSDSs have been around, in one form or another, since the time of the ancient Egyptians. Although MSDS formats vary somewhat between countries and authors (an international MSDS format is documented in ANSI Standard Z400.1-1993), they generally outline the physical and chemical properties of the product, describe potential hazards associated with the substance (health, storage cautions, flammability, radioactivity, reactivity, etc.), prescribe emergency actions, and often include manufacturer identification, address, MSDS date, and emergency phone numbers. A Material Safety Data Sheet or is a summary of the key properties of a substance and the hazards associated with its use. Material Safety Data sheets are not standardized, so it’s important to consult one provided by a respected source. Two chemicals that have the same name may have very different MSDS sheets because the particle size of the product and its purity may significantly affect its properties. MSDS sheets should be kept in an easy-to-find location and made accessible to all persons dealing with chemicals. Although MSDSs are targeted at workplaces and emergency personnel, any consumer can benefit from having important product information available. An MSDS provides information about proper storage of a substance, first aid, spill response, safe disposal, toxicity, flammability, and additional useful material. MSDSs are not limited to reagents used for chemistry, but are provided for most substances, including common household products such as cleaners, gasoline, pesticides, certain foods, drugs, and office and school supplies. Familiarity with MSDSs allows for precautions to be taken for potentially dangerous products; seemingly safe products may be found to contain unforeseen hazards. In many countries, employers are required to maintain MSDSs for their workers, so a good place to locate MSDSs is on the job. Also, some products intended for consumer use are sold with MSDSs

enclosed. College and university chemistry departments will maintain MSDSs on many chemicals. However, if you are reading this article online then you have easy access to thousands of MSDSs via the internet. There are links to MSDS databases from this site. Many companies have MSDSs for their products available online via their websites. Since the point of an MSDS is to make hazard information available to consumers and since copyrights don't tend to apply to restrict distribution, MSDS are widely available. Certain MSDSs, such as those for drugs, may be more difficult to obtain, but are still available upon request. To locate an MSDS for a product you will need to know its name. Alternate names for chemicals are often provided on the MSDS, but there is no standardized naming of substances. The chemical name or specific name is used most often to find MSDSs for health effects and protective measures. IUPAC (International Union of Pure and Applied Chemistry) conventions are used more often than common names. Synonyms are often listed on MSDSs. The molecular formula may be used to locate a chemical of known composition. You can usually search for substance using its CAS (Chemical Abstracts Service) registry number. Different chemicals may have the same name, but each will have its own CAS number. Sometimes the easiest way to locate a product is to search by manufacturer. Products may be found using their US Defense Department NSN. A National Supply Number is a four-digit FSC class code number plus a nine-digit National Item Identification Number or NIIN. A trade name or product name is the brand, commercial, or marketing name the manufacturer gives the product. It does not specify what chemicals are in the product or whether the product is a mixture of chemicals or a single chemical. A generic name or chemical family name describes a group of chemicals with related physical and chemical properties. Sometimes an MSDS will list only the generic name of a product, although in most countries laws require that chemical names also be listed. An MSDS might appear to be intimidating and technical, but the information is not intended to be difficult to understand. You might simply scan an MSDS to see if any warnings or hazards are delineated. If the content is difficult to understand there are online MSDS glossaries to help define any unfamiliar words and often contact information for further explanations. Ideally you would read an MSDS before obtaining a product so that you could prepare proper storage and handling. More often, MSDSs are read after a product is purchased. In this case, you can scan the MSDS for any safety precautions, health effects, storage cautions, or disposal instructions. MSDSs often list symptoms that might indicate exposure to the product. An MSDS is an excellent resource to consult when a product has been spilled or a person has been exposed to the product (ingested, inhaled, spilled on skin). The instructions on an MSDS do not replace those of a health care professional, but can be helpful emergency situations. When consulting an MSDS, keep in mind that few substances are pure forms of molecules, so the content of an MSDS will depend on the manufacturer. In other words, two MSDSs for the same chemical may contain different information, depending on the impurities of the substance or the method used in its preparation. Material Safety Data Sheets are not created equal. Theoretically, MSDSs can be written by pretty much anyone (although there is some liability involved), so the information is only as accurate as the author's references and understanding of the data. According to a 1997 study by OSHA "one expert panel review established that only 11% of the MSDSs were found to be accurate in all of the following four areas: health effects, first aid, personal protective equipment, and exposure limits. Further, the health effects data on the MSDSs frequently are incomplete and the chronic data are often incorrect or less complete than the acute data". This doesn't mean that MSDSs are useless, but it does indicate that information needs to be used with caution and that MSDSs should be obtained from trustworthy and reliable sources. The bottom line: Respect the chemicals you use. Know their hazards and plan your response to an emergency before it happens!
